Data Source: UN Department of Economic and Social Affairs, Population Division (2022). *World Contraceptive Use 2022*. **Notes:** Data are for women married or in union (MWRA). Vasectomy's method share is its proportion of use among MWRA users of modern contraception. Lesotho and Namibia do not meet study criteria for population size, but have vasectomy prevalence of 0.4% (2018) and 0.3% (2013) respectively, with tubectomy prevalence of 1.7% and 6.4% respectively. *Dashes in these columns indicate that a value for vasectomy prevalence or tubectomy prevalence was not provided in the country's survey report (due to the very low number of surveyed women indicating reliance on vasectomy.)
